

VIB2019 - Intro

Number of participants: 53

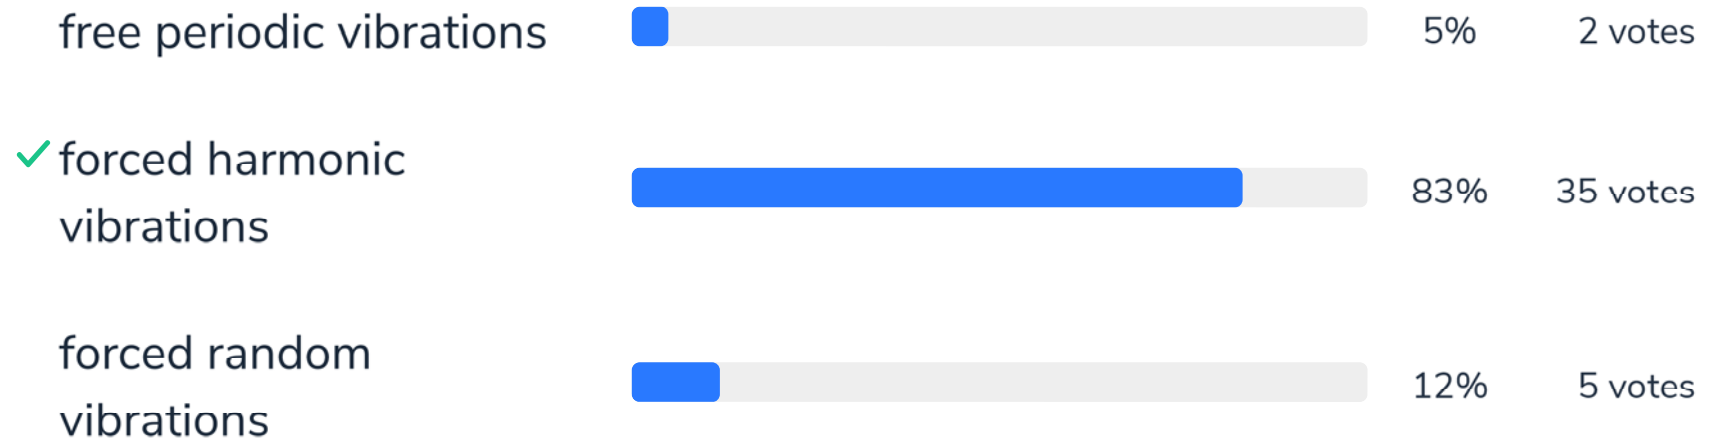

1

The mechanism of vibrations results from

✓ A transfer between kinetic and potential energy		100%	29 votes
A transfer between kinetic and dissipated energy		0%	0 votes
A transfer between potential and dissipate energy		0%	0 votes

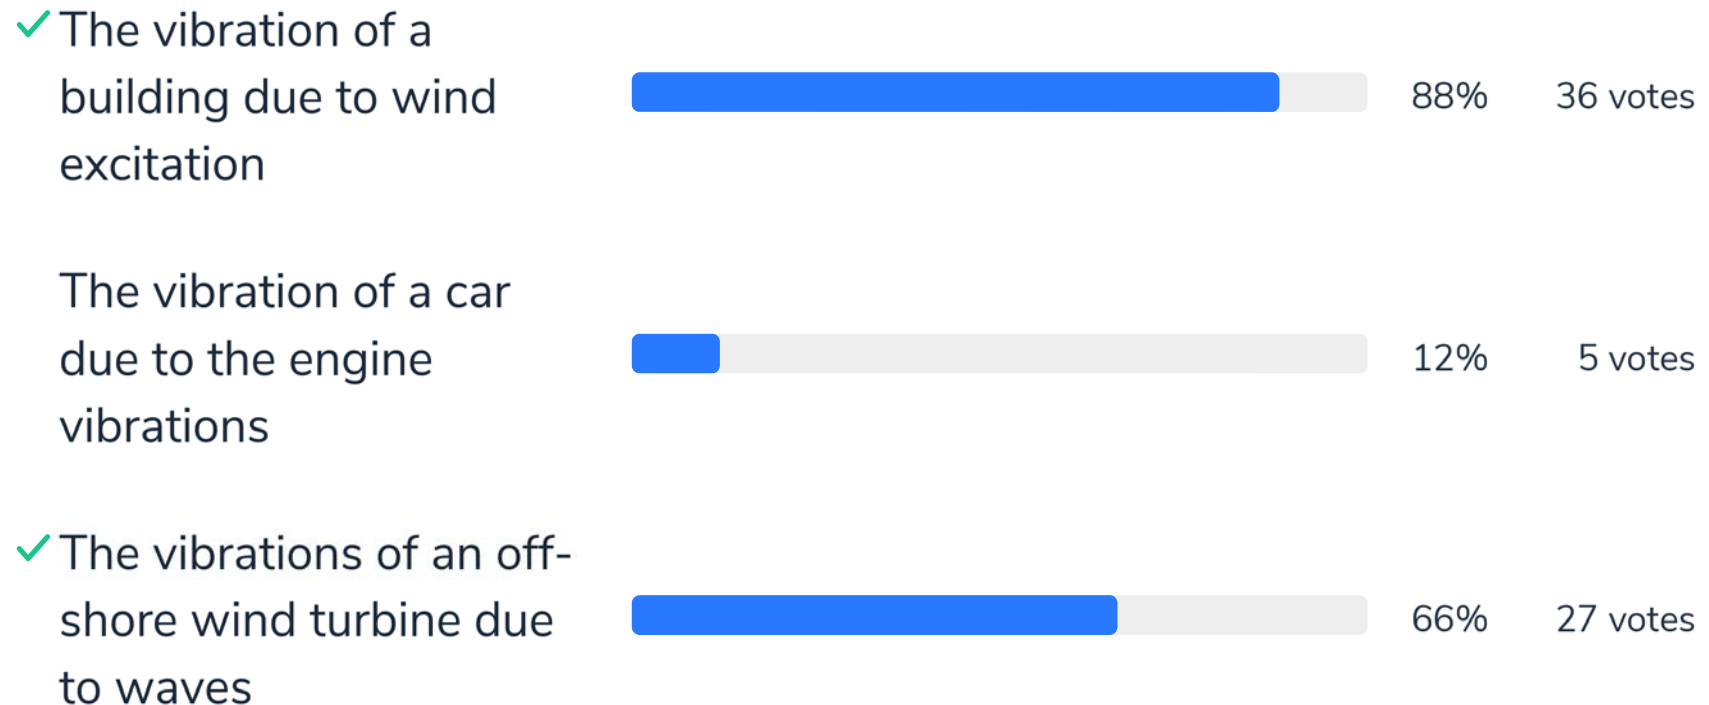

2

The vibrations of a working washing machine can be classified as

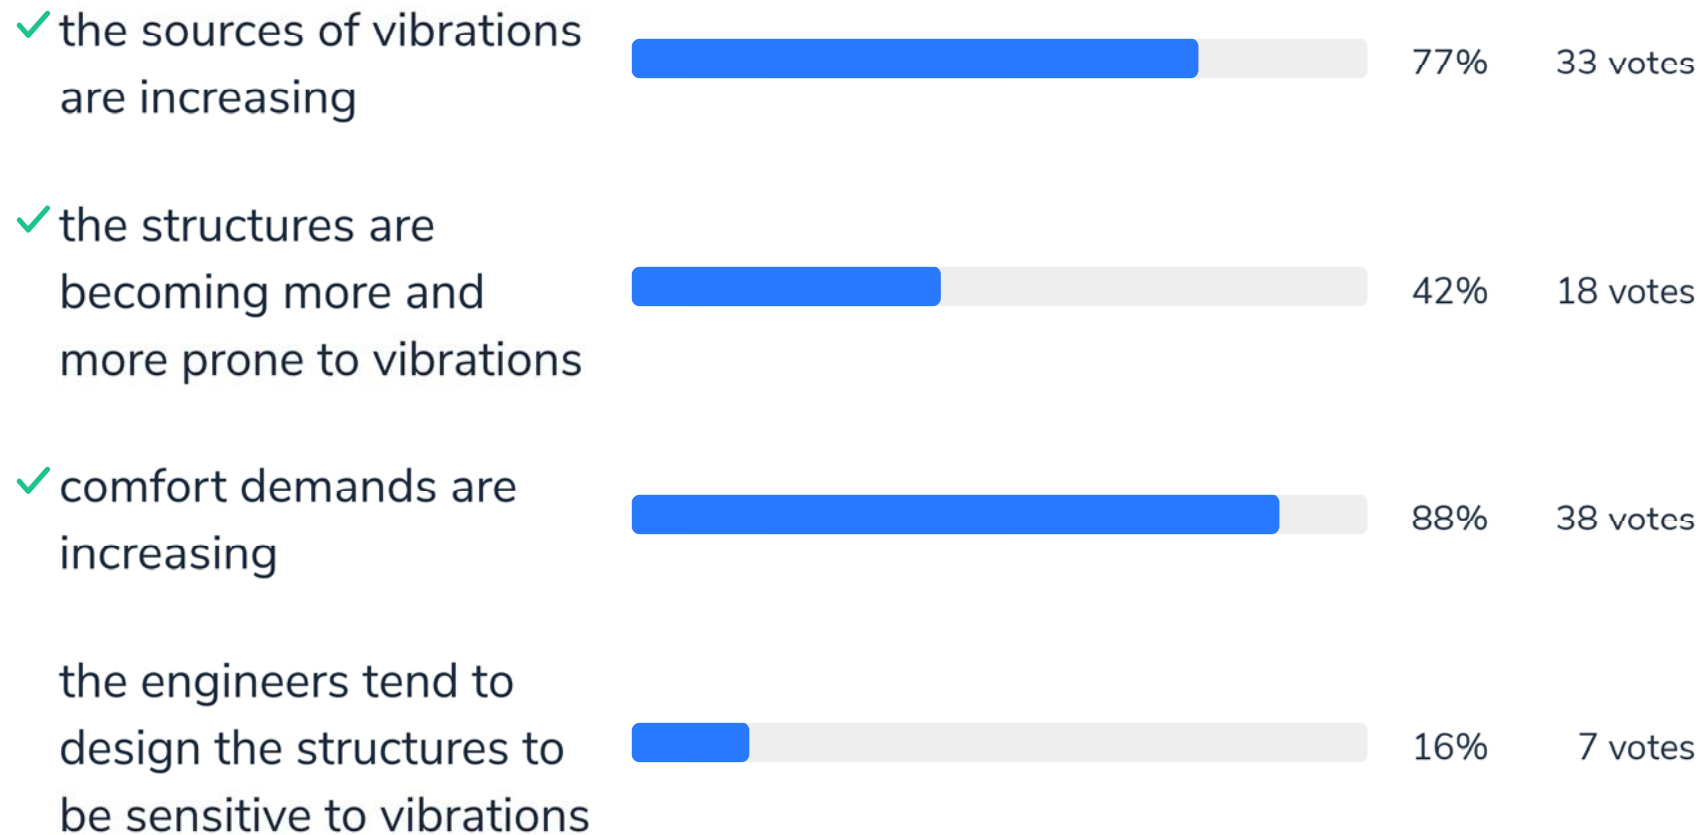

3

Which of these vibrations is a forced random vibration ?

4

Vibrations in mechanical engineering are becoming more and more important because:

5

Which of these structures can be very susceptible to wind induced vibrations ?
